

PrimeCart

The commerce backbone for small Ghanaian retailers

QUICK BRIEF

What it is

PrimeCart is a lightweight commerce operations platform built for small Ghanaian retailers — phone accessory shops, electronics and gadget sellers, and fashion and jewellery boutiques. It replaces the notebook stock count and the scattered WhatsApp order thread with one place to manage inventory, take orders, and sell online.

Built for

Phone & electronics

Accessory shops, gadget sellers, kiosks tracking fast-moving stock

Fashion

Boutiques currently taking orders entirely over DM

Jewellery

Retailers who need one link to send customers instead of a catalogue of photos

What merchants get

- **Inventory & order dashboard**
One screen for stock levels, orders, and sales — mobile-first, so it works from a phone at the stall.
- **Automatic stock sync**
A sale on the storefront updates inventory immediately — no manual reconciling at the end of the day.
- **Sales reporting**
A running view of what is actually selling, not a guess from memory.
- **Your own storefront**
A public shop at [yourname.primecart.app](#) that customers can browse and order from directly.
- **Secure payments**
Checkout runs on Paystack, so customers pay with the methods they already trust.

How it works

1

Sign up & set up shop

Create an account, add a business name, logo, and brand colour.

2

Add products

List items with photos, prices, and stock — a few minutes per product.

3

Share your link & sell

Send [yourname.primecart.app](#) anywhere customers already are — WhatsApp, Instagram, TikTok.

primecart.app

Free to try — reply to this brief and we'll set your first products up together.
